THIS WEEK IN Neurology®
1611 Highlights of the November 17 issue

EDITORIALS
1612 Relapses in multiple sclerosis: Important or not? Ruth Ann Marrie and Gary Cutter

1614 Red meets white: Do microbleeds link hemorrhagic and ischemic cerebrovascular disease? Chelsea S. Kidwell and Steven M. Greenberg

ARTICLES
1616 Impact of multiple sclerosis relapses on progression diminishes with time H. Tremlett, M. Yousefi, V. Devonshire, P. Rieckmann, and Y. Zhao, on behalf of the UBC Neurologists

1624 Poor PASAT performance correlates with MRI contrast enhancement in multiple sclerosis J. Bellmann-Strobl, J. Wuerfel, O. Aktas, J. Dörr, K.D. Wernecke, F. Zipp, and F. Paul

1649 Cortical event-related potentials in preclinical familial Alzheimer disease E.J. Golob, J.M. Ringman, R. Irinajiri, S. Bright, B. Schaffer, L.D. Medina, and A. Starr

1677 Bevacizumab for recurrent ependymoma R.M. Green, T.F. Cloughesy, R. Stupp, L.M. DeAngelis, E.A. Woyshner, D.E. Ney, and A.B. Lassman

1681 Lower serum lipid levels are related to respiratory impairment in patients with ALS A. Chiò, A. Calvo, A. Ilardi, E. Cava1lo, C. Moglia, R. Mutani, A. Palmo, R. Galletti, K. Marinou, L. Papetti, and G. Mora

1686 Study of 962 patients indicates progressive muscular atrophy is a form of ALS W.-K. Kim, X. Liu, J. Sandner, M. Pasmantier, J. Andrews, L.P. Rowland, and H. Mitsumoto

VIEWS & REVIEWS
1693 Smoking may be considered an established risk factor for sporadic ALS Carmel Armon

CLINICAL IMPLICATIONS OF NEUROSCIENCE RESEARCH
1699 The locus ceruleus norepinephrine system: Functional organization and potential clinical significance Eduardo E. Benarroch

CLINICAL/SCIENTIFIC NOTES
1705 HIV-related immune reconstitution cryptococcal meningoradiculitis: Corticosteroid response A. Brunel, A. Makinson, N. Menjot de Champfleur, E. Thouvenot, V. Le Moing, G. Lefalher, A. Bonafé, and J. Reynes
Neurosurgical treatment of tremor in anti-myelin-associated glycoprotein neuropathy
J. McMaster, G. Gibson, F. Castro-Prado, A. Vitali, and C.R. Honey

Extrapyramidal signs are a common feature of spinocerebellar ataxia type 17

RESIDENT & FELLOW SECTION

Teaching Video NeuroImages: Wernicke encephalopathy without mental status changes
R.J. MacDonald, P.P. Stanich, P.A. Monrad, and F.J. Mateen

Teaching NeuroImages: Acute hemorrhagic leukoencephalitis after mumps
Shiva Kumar R. and Abraham Kuruvilla

CORRESPONDENCE

Suicidality, depression screening, and antiepileptic drugs: Reaction to the FDA alert
To the Editor: Abdorosool Janati. Reply from the Authors: B.F. Shneker, J.S. Cios, and J.O. Elliott

Warm and cold complex regional pain syndromes: Differences beyond skin temperature?
To the Editor: A.W.A. Bruggeman, M.H. Oerlemans, and J.P.M. Fröike. Reply from the Authors: Tatiana Eberle and Frank Birklein

Voluntary brain processing in disorders of consciousness
To the Editor: Iraj Derakhshan. Reply from the Authors: Caroline Schnakers and S. Laureys

Migraine and suicidal ideation in adolescents aged 13 to 15 years
To the Editor: Pasquale Parisi. Reply from the Authors: S.-J. Wang, J.-L. Fuh, K.-D. Juang, and S.-R. Lu

Incidental MRI anomalies suggestive of multiple sclerosis: The radiologically isolated syndrome
To the Editor: Fraser Moore. Reply from the Authors: Darin T. Okuda

Neurology® Podcast

Study of 962 patients indicates progressive muscular atrophy is a form of ALS
The weekly podcast of content from Neurology is located on the AAN Web site at www.aan.com. Select the “Podcast” button in the Neurology section under Academy Publications to subscribe to the podcasts or listen to an individual podcast.

This week’s podcast features an interview by Dr. Michelle Mauermann with Dr. Hiroshi Mitsumoto about his paper on progressive muscular atrophy as a form of ALS.
