A 31-year-old man presented with a 3-year history of progressive weakness and paresthesias of both legs. Spinal MRI revealed a 10-cm intraspinal tumor at T1-T5 with syringomyelia on both ends (figure, A–C). Surgery successfully resected the intramedullary tumor grossly (figure, D and E). Pathology suggested the diagnosis of solitary fibrous tumor (figure, F–P). Intramedullary solitary fibrous tumors are rare, with approximately 17 cases reported and none longer than 2 vertebrae.1

Qingfeng Wang, MD,* Xin Hu, MD,* Yiying Wang, MD, Chao You, MD, PhD, Haifeng Chen, MD

*These authors contributed equally to this work.

From the Departments of Neurosurgery (Q.W., X.H., C.Y., H.C.) and Pathology (Y.W.), West China Hospital, Sichuan University, China.
Author contributions: Qingfeng Wang: engaged in clinical care and investigative workup of the patient, study concept and design, acquisition of data, and drafted the manuscript. Xin Hu: revision of manuscript and edit of figure. Yiying Wang: pathologic study. Chao You: study concept and design. Haifeng Chen: in charge of surgery, clinical care and investigative workup of the patient, study concept and design, and revision of manuscript

Acknowledgment: The authors thank the staff (Department of Neurosurgery, West China Hospital) engaged in the surgery and clinical care of the patient.

Study funding: No targeted funding reported.

Disclosure: The authors report no disclosures relevant to the manuscript. Go to Neurology.org for full disclosures.

How Do YOU Compare? Access New **Neurology** Compensation and Productivity Report

The AAN’s 2016 Neurology Compensation and Productivity Report and customizable dashboard is now available. Whether you are a physician or practice administrator in a large or small practice setting, the 2016 Neurology Compensation and Productivity Report empowers you to:

- Compare and customize your individual practice-related data with your colleagues at local and national levels
- Determine if you are being compensated fairly relative to your peers
- Use the data in demonstrating your value to payers and to delivering quality patient care
- Discover fair market value based on your subspecialty, region, and practice type
- Create charts and graphs and download them right to your desktop
- Assess patient and practice management principals and implement efficiencies that ultimately can help improve the quality of patient care

A huge intramedullary solitary fibrous tumor
